

## **Broadband UK Program - Broadband - Internet Services in your area**

### **Turn Key expansion of the "Local Loop" and one-stop financing**

Hi,

with this letter we would like to offer our services and technology for the Broadband UK project in your region.

The British Government has allocated a budget for the expansion of the Local Loop and Broadband Internet Services in your region.

We are in close contact with the British House of Commons, especially with the Broadband Internet Committee, since 2009. We have invented the local loop wholesale idea and we qualify for the Broadband UK program as Prime Contractor and fulfill all requirements of the Ministry of Culture and Sports.

We offer a complete Turn-Key roll-out with the latest available technology. All existing telecommunication services can be fully passed transparently through our technology.

Our financing partners are convinced of our concept, technology and economical approach and take over the financing of complete networks in the two-digit million range, since we can show very good ROI values. You would provide a fair share of equity for the joint "Local Loop" operator company we set up together. On request and depending on the size of our project we can involve our partner VimpelCom to operate the network.

The used technology has the following advantages

- Economical operation of the last mile is also possible for smaller telecom operators
- Financing of a pure operator for the "Local Loop" is possible.
- The design ensures a smooth migration from established wireless standard (up to 50 Mbit/s) to a comprehensive fiber optic network, depending on need and economic viability at that area.

The network roll-out will be started immediately and successively with the progress of the payment and the progress of bank financing.

I wish to participate in your local broadband project and can provide more detailed information on your request.

Yours sincerely,

Signed by, Hanno Kakosch
